EXAM PROFESSIONAL CLOUD NETWORK ENGINEER TOPIC 1 QUESTION 118 DISCUSSION

Actual exam question from Google's Professional Cloud Network Engineer
Question #: 118
Topic #: 1
[All Professional Cloud Network Engineer Questions]

You just finished your company's migration to Google Cloud and configured an architecture with 3 Virtual Private Cloud (VPC) networks: one for Sales, one for Finance, and one for Engineering. Every VPC contains over 100 Compute Engine instances, and now developers using instances in the Sales VPC and the Finance VPC require private connectivity between each other. You need to allow communication between Sales and Finance without compromising performance or security. What should you do?

A. Configure an HA VPN gateway between the Finance VPC and the Sales VPC.

B. Configure the instances that require communication between each other with an external IP address.

C. Create a VPC Network Peering connection between the Finance VPC and the Sales VPC.

D. Configure Cloud NAT and a Cloud Router in the Sales and Finance VPCs.
