EXAM PROFESSIONAL CLOUD NETWORK ENGINEER TOPIC 1 QUESTION 188 DISCUSSION

Actual exam question from Google's Professional Cloud Network Engineer
Question #: 188
Topic #: 1
[All Professional Cloud Network Engineer Questions]

Your company uses Compute Engine instances that are exposed to the public internet. Each compute instance has a single network interface with a single public IP address. You need to block any connection attempt that originates from internet clients with IP addresses that belong to the BGP_ASN_TOBLOCK BGP ASN. What should you do?

A. Create a new Cloud Armor backend security policy, and use the --network-src-asns parameter.

B. Create a new Cloud Armor network edge security policy, and use the --network-src-asns parameter.

C. Create a new Cloud Armor edge security policy, and use the --network-src-asns parameter.

D. Create a new firewall policy ingress rule, and use the --network-src-asns parameter.

Selected Answer: C

C is correct.
Incorrect:
A. Backend security policy applies to backend services behind an HTTP(S) load balancer—not directly to instances with public IPs.

B. Network edge security policies do not support the --network-src-asns parameter.

D. Firewall policies only support IP ranges, not ASN-based filtering. So this option is invalid.

Link showing directly that B is correct:

https://docs.cloud.google.com/armor/docs/network-edge-policies#configure_custom_rules_for_network_edge_security_policies

"
The supported fields for network edge security policies are as follows:
...
Source ASNs --network-src-asns BGP Autonomous System Number of the source IP address.
"
